```

The present invention relates to an isolated nucleic acid encoding a melanoma differentiation associated gene-5 (Mda-5) polypeptide. Mda-5 contains a caspase recruitment domain (CARD) and a RNA helicase motif. Mda-5 is a novel interferon (IFN) inducible gene with structural influrations to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells treated with the combination of recombinant fibroblast IFN and the antileukaemic compound mezerain (MEZ). Mda-5 is useful for identifying compounds that may induce its expression. Mda-5 is useful for treating compounds that may induce its expression. Mda-5 is useful for treating compounds that may induce its expression. Mda-5 is useful for treating cancer e.g., melanoma, neuroblastoma, astrocytoma, glioblastoma multiforme, cervical cancer, breast cancer, colon cancer, prostate cancer of the central nervous system and especially where the cancer is a cancer of the central nervous system and apoptosis. The Mda-5 promoter exhibits melanocyte tissue specificity and minimises systemic toxicity. The present sequence is human Mda-5 CDNA

comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a healthy subject.

SEQ ID NO 156; 241pp; English

The present invention describes a method of testing for bronchial asthmma cor circulations obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the capression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (31) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (82) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (22) whose expression levels decrease when respiratory epithelial cells are testing for bronchial asthma or chronic obstructive pulmonary disease; (c) a kit for screening for a candidate compound for a therapeutic agent (2) a kit for screening for a candidate compound for a therapeutic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a natimal model for bronchial asthma or chronic obstructive pulmonary disease, comprising the compound, cobstructive pulmonary disease, (a) a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease, comprising the compound, copernession of the gene through an RNAi effect or an antibody recognising compression of the gene through an RNAi effect or an antibody recognising copronchial asthma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene, and for a bordial asthma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent invention.

C sequence is used in the exemplification of the present invention. for bronchial asthma testing describes a method of

                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACAATTGAAGACAGAAACCGGATTGCTGCTGCAGAAAACAATGGAAATGAATCAGGTGTA

The invention relates to a novel method for detecting soft tissue sarcome which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic soil sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor. 8  $\times$  9  $\times$  9

           The present sequence is the coding sequence for human RH116. RH116 is a 116kDa protein and has homology to RNA helicases (DEXH box). HH116 and its coding sequence are useful for treating cancer; acute box chronic infections (especially by HV or hepatitis B or C); inherited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arteriosclerosis and diabetes, but many others listed) and to prevent graft rejection. HH116 and its coding sequence are also useful for inducing, or increasing, the immune response to a vaccine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the

recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; a method of detecting polynucleotides or polypeptides of the invention; and methods of polynucleotides or polypeptide of the invention; and methods of carrying out the methods of the invention. The invention further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes or invention; methods for the identification of compounds that modulate the cypression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the contigue of the invention are contigued in diagnostics, drug screening, forensice, gene mapping, in the useful in diagnostics, drug screening, forensice, gene mapping, in the traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are cide mutations responsible for genetic disorders and other neurodegenerative diseases, ansemia, platelet concerned. The nucleic acids may also be used as hybridisation probes or concerned and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, are also useful in generating antibodies, as molecular weight markers, are also useful in generating antibodies, as molecular weight markers, are also useful in generating antibodies, as molecular weight markers, concerned as food supplements. The present sequence represents a specifically contained human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printer expression as percentages. ftp.wipo.int/pub/published\_pct\_sequences.

for cancer cell growth suppression, apoptosis and anti-viral Gene useful

Page 134-148; 152pp; English Disclosure;

The present invention relates to an isolated nucleic acid encoding a melanoma differentiation associated gene-5 (Mda-5) polypeptide. Mda-5 contains a caspase recruitment domain (CARD) and a RNA helicase motif. Mda-5 is a novel interferon (IRW) inducible gene with structural similarities to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells treated with the combination of recombinant fibroblast IFN and the antileukaemic compound mezerein (MEZ). Mda-5 is useful for identifying compounds that may induce its expression. Mda-5 is useful for treating cancer e.g., melanoma, neuroblastoma, astrocytoma, glioblastoma multiforme, cervical cancer, breast cancer, colon cancer, prostate cancer of the central nervous system and especially where the cancer is a cancer of the central nervous system and appotosis. The Mda-5 promoter exhibits melanocyte tissue specificity and minimises systemic toxicity. The present sequence is designated SEQ ID NO:2 in the sequence listing, but does not correspond to the sequence designated SEQ ID NO:2 in the main referred to in the specification, and has been represented in a protein referred to the testing

```

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises (a) a group of genes (31) whose expression levels increase when respiratory epithalial cells are stimulated with interleukin-13; or (b) a group of genes (32) respiratory epithelial cell; interleukin-13; respiratory; antiasthmatic; gene; therapy; marker gene; ds. disease by comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a healthy subject. ž pulmonary Izuhara

whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (1) for testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent to trreat bronchial asthma or chronic obstructive pulmonary disease; (3) a inducer that induces bronchial asthma in a mouse; (5) a cathma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma or chronic obstructive pulmonary disease; (5) a cathma or chronic obstructive pulmonary disease, comprising the compound, a marker gene or an antisene nucleic acid corresponding to a portion of the marker gene nucleic acid corresponding to a portion of corpression of the gene through an RNAi effect or an antibody recognising crockin encoded by a marker gene; and (7) a DNA chip for testing for a protein encoded by a marker gene; and (7) a DNA chip for testing for corporation asthma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. (1) has respiratory conditional asthma or chronic obstructive pulmonary disease. The present corporation of the present invention. 5555555555555555555555555**%**&

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-465566/50. P-PSDB; AAU23090. Novel polypeptides and polymucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.

Claim 4; SEQ ID NO 186; 1180pp; English.

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences polypeptides (Example 1) and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the isomerases or ligases of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagonders including hyperproliferative disorders (e.g. cancer), isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), artheries), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), cardiovascular disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. influence); influenced in gene theritity) and infectious disorders (e.g. influenca). The polymoclectides of the invention can also be used in gene therapy. AAS41684 represent convention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly the mulpo at ftp.wipo.int/pub/published\_pct\_sequences

                                                                                                                                                                                                                                                                                               The present invention relates to novel human secretory or membrane proteins (ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2061
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2660
in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral seclerosls, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
                                                                                                                                                                             The present invention relates to human RH116 (see AAM47798). RH116 is a 116kDa protein and has homology to RNA helicases (DEXH box). RH116 and its coding sequence are useful for treating cancer; caute or chronic infections (especially by H1V or hepatitis B or C); inherited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arteriosclerosis, osteoporosis and diabetes, but many others listed) and to prevent graft rejection. RH16 and its coding sequence are also useful for inducing, or increasing, the immune response to a vaccine. The present sequence was used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ggaagtrigcccagccaagccrrggaagggaagaararcarcarcrgccrcccracaggag

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   'n.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2061
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2181
                                                                                                                                                                                                                             immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-brager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokineiic activity, haemostatic and thrombolytic activity, arthritis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leuksemias and C.N.S disorders. ADC32572
```

The invention relates to 971 novel human CDNA sequences (ADC29919-CADC3089) and the polypeptides they encode (ADC30890-ADC31860). The ADC30889) and the polypeptides they encode sequences over 99% identical with convention also relates to nucleic acid sequences over 99% identical with convention of a polypeptide of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; a method of detecting desints a polypeptide of the invention; a method of detecting polymucleotides or polypeptides of the invention; and methods of control invention further discloses methods to peventially, treating or invention further discloses methods of peventially, treating or and/or monoclonal antibodies for carrying out the methods of the invention, methods for the identification of compounds that modulate the and/or monoclonal antibodies for carrying out the methods of the invention or activity of the polymucleotide and/or polypeptide; and 767 expression or activity of the polymucleotide and/or polypeptide; and 767 expression or activity of the polymucleotide and/or polypeptide; and 767 expression or activity of the polymucleotide and/or polypeptide; and 767 expression or activity of the polymptides encoded by the contign (ADC31861-ADC32627) and the polypeptides encoded by the contign (ADC31861-ADC32627) and the polypeptides of the invention are contigned and products dependent on DNA and animo acid sequences. They are data and products dependent on DNA and animo acid sequences. They are also used for treating diseases such as Parkinson's disease or cancer. The nucleic acids may also be used as protein. The polypeptides or primers, and in the recombinant production of a protein. The polypeptides

asthma

Cc for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or constraints the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes and comparing the levels of the detected to hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes orterlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a comprising a microarray and a plurality of polymicleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polymicleotides. The microarray for monitoring confentifying agents for the treatment of the diseases, asthma, confentifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of mRNAs, cDNAs or genomic fragments. This sequence capresents a human cDNA of the invention. Note: The sequence data for this patent did not form part of from INDAD a sendara usure one will be electronic format directly form inspense. USPTO at segdata.uspto.gov/sequence.html \$
